

# EXECUTIVE SUMMARY

Eco-Safe Systems, In. is a publicly traded "green" company (ESFS.PK) with proven technologies, patent pending products, rapidly increasing sales and market-share. It is an early stage food disinfection and water purification company. Eco-Safe's products produce 100% safe ozonated water treatments for various applications in multiple industries.

The overall market for its products is extremely broad, since it includes every segment of the global economy where clean water is required. However, Eco-Safe has a highly focused marketing and sales plan, initially addressing the requirements of clients in the Food Industry. Recent installations and tests in a major restaurant chain and a major supermarket chain have proven very successful.

Mid to long-term, other market segments such as dairy, medical, soil and ground water remediation, desalination, and high-end housing will be cultivated once the company has the necessary capacity to achieve this on a controlled profitable growth basis.

During the product design phase, all products were designed with ease of manufacturability in mind, and by using commercial off-the-shelf (COTS) components wherever possible. The highest grade components and sub-assemblies are used in Eco-Safe's products, and only after passing rigorous testing.

Presently, the company manufactures short-run requirements in-house, while outsourcing larger orders to US based contract manufacturers and fulfillment companies. Other domestic and offshore contract manufactures/fulfillment companies are being investigated to meet the company's requirements for its ever expanding backlog of orders.

Eco-Safe has the right products, at the right time, as the global market has an increased need for clean water and safe food. However, people are what really make companies successful. The company's management team, Board, and Board of Advisors have a strong track record of achievements, and are passionately committed to the success of Eco-Safe Systems.
